

Week of September 30 Goals and Report

Progress This Week

This week I completed the second HACK3D homework, the gear reconstruction task. I checked the CT images, corrected their rotation, and found links hidden in the image metadata. One link led to the original gear STL after I solved a Caesar cipher riddle. I saved the recovered model, an approximate reconstruction from the slices, and the code and report in my GitHub repository.

I also worked with my team, No Fix, to complete the CSAW qualifier. We worked through the reconstruction challenges and put together our submission files and report.

Goals for Next Week

My goal for next week is to continue focusing on CSAW. I plan to review our qualifier work and keep practicing related reconstruction challenges with No Fix.
